What's New in the AutoCAD?

If you already know how to use the application, this new update is designed to help you get up and running quickly with a new option: Markup Assist, which you can use to send feedback as a rich object. How to use the Markup Assist feature: 1) Assign a color to your object, and export a.png to a hard disk (or send the.png to your recipient by email). 2) Open Markup Assist and then send your original design by going to the right menu at the top and selecting "Markup Assist...." 3) You'll be prompted to enter your project name and recipient email address and then send it to your recipient. 4) When your recipient opens the.png, the imported object and their own drawing will be linked. 5) The recipient can easily adjust the imported object on their own. 6) There is no need to save any changes to the drawing before sending it back to you. You can either sync the changes to your design, or start a new drawing. (Video: 1:16 min.) New Layout Tools: You can now have multiple instances of the same object on your drawing canvas with no visible overlap. In the Design Center, right-click on a layer, and select "Add Object to Layer..." to add a new layer object to the canvas. You can also bring two or more layers of the same object together by right-clicking on a layer and selecting "Merge with Layer." You can also manually merge layers on your drawing by choosing the "Layer" menu, and choosing "Merge with Layer." Using a single object on multiple layers, you can group objects and change their colors to fit your drawing needs. You can also view your layers as a panel of objects, or as separate panels on the drawing canvas. Drag and drop objects from one panel to another. When you drag an object to another panel, you can choose to copy or move it (either of which is represented by a green and blue box icon, respectively). You can also move objects into or out of a panel, and quickly and easily make edits to your panels with the panel options. You can always change the default panel type (window, sheet, or panel) to suit your needs. New Layered Staircase Layout: The new Layered St
